OPTIMISED **DOCUMENT**  
**WORKFLOWS** IN HOSPITALS.  
INNOVATIVE HEALTHCARE SOLUTIONS FROM KYOCERA

Day-to-day business in a hospital presents a whole array of challenges. On the one hand, limited budgets require cost-cutting measures that don't create extra problems for patients and staff alike. On the other hand, documentation and archiving requirements generate a lot of work – work that's often painstaking and has to be done manually. Last but not least confidential patient information has to be protected from unauthorised access at all times, no matter how hectic the days get. KYOCERA's multifunctionals provide you with a wide array of support options for mastering all these tasks. We have developed flexible solutions to ensure you are able to work efficiently and at the same time minimise costs. By using a modular concept and open interfaces, we customise our systems to meet the particular requirements of your hospital and offer you a solution that takes care of your particular needs. Leaving you free to concentrate on the things that really matter – taking care of your patients!

**“As a pilot clinic, our goal is to continually improve the quality of healthcare we provide. KYOCERA's solutions help us to optimise our treatment processes.”**

Volker Lowitsch, University Hospital Aachen, Head of IT

### **EFFICIENT INFORMATION MANAGEMENT VIA ELECTRONIC PATIENT FILES.**

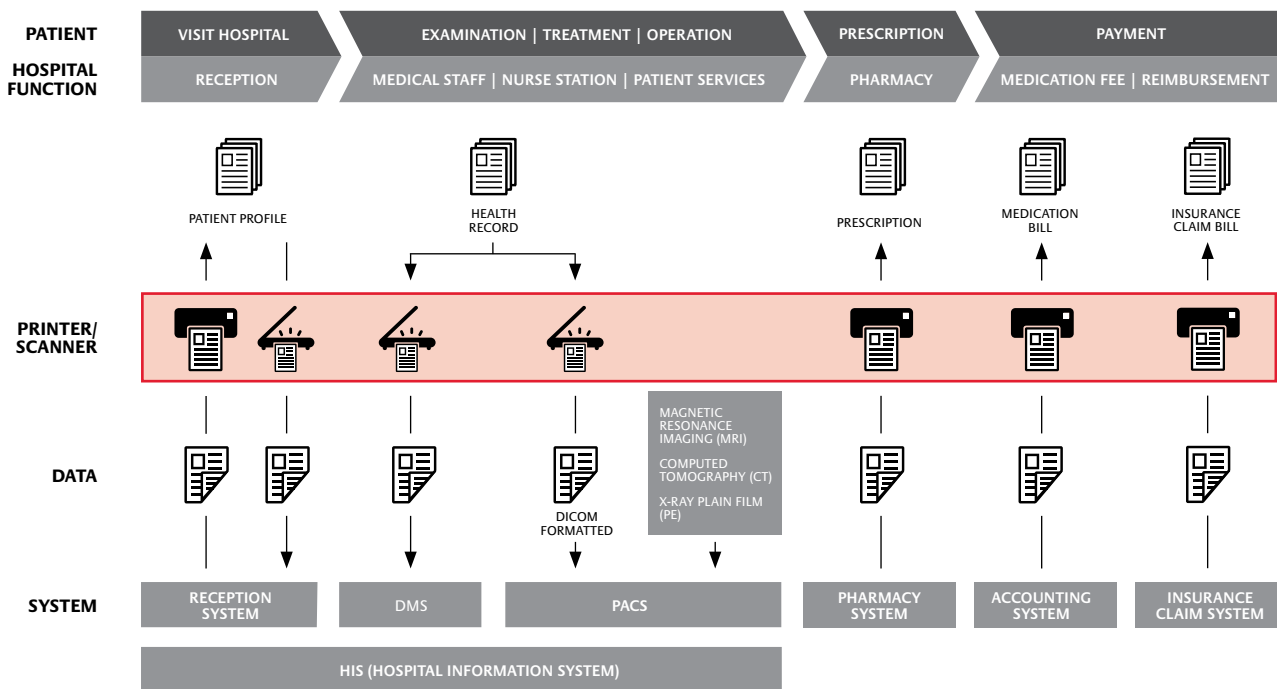

By integrating a multifunction system from KYOCERA into the workflow for scanning documents, you can transfer paper-based patient documents and treatment information to an electronic patient file quickly, easily and securely. You can therefore ensure that all information necessary to treat and bill a patient is available whenever it's needed, and that the information relates to the correct individual. Furthermore, the system's authentication function assures compliance with all process tracking requirements before the scan is carried out.

### **PRINT SECURELY WHERE & WHEN YOU WANT.**

The Print & Follow™ concept tracks each and every print order via a personal identification code and saves this information on the server, allowing you to enhance the efficiency of printing processes significantly. Should, for instance, the standard printer at a particular station be blocked, you can simply choose a different device thanks to the system. This way, continual printer availability is guaranteed for all your documents, making sure that processes run smoothly round the clock, every day, every shift. Moreover, personal identification codes used at the device ensure that sensitive patient documents are protected from unauthorised access.

# HOW KYOCERA SOLUTIONS OPTIMISE YOUR DOCUMENT WORKFLOW.

We offer solutions for all aspects of hospital document workflows. Our offerings will always be tailored to your needs.

## ▶ PATIENT DATA MANAGEMENT PACKAGE: NSi AUTOSTORE & PCL BARCODE

- ▶ Unique patient barcode for distinctive patient identification
- ▶ Scan all documents and automatically allocate to the right patient
- ▶ Make sure that all medical information is correct and instantly available

- ▶ Automate scan and archiving workflows
- ▶ Comfortable access to all necessary forms and documents
- ▶ No computer skills needed – ideal for all staff

## ▶ SECURITY PACKAGE: MYQ & USB CARD READERS

- ▶ Complete output security to protect patient privacy
- ▶ Accounting and print rules for tracking and control
- ▶ Hospital access cards can be used for device authentication

## ▶ MDS PACKAGE: MDS & KYOFLEETMANAGER

- ▶ A-to-Z Service including Service Level Agreement and consumables management
- ▶ Guaranteed cost and downtime reduction without impact to quality
- ▶ Capability to manage multiple brands

KYOCERA

# HEALTHCARE SOLUTIONS.

## OUR SOLUTIONS YOUR SAVINGS

- ▶ **Reduce your output costs**  
Our services and applications are guaranteed to reduce your output costs considerably without any impact on quality.
- ▶ **Streamline your output environment**  
Do you know your real output costs? Our consultants can make an analysis and design an output environment that exactly matches your needs – at considerably less costs and with no compromises to quality or functionality. Our complete service package will free up both IT and administrative resources.
- ▶ **Secure confidential data**  
We understand that data privacy is absolutely critical for healthcare. We therefore secure your output with an authentication system that's easy to use and ensures that all confidential data remains confidential.
- ▶ **Improve staff productivity**  
Your staff should be spending as much time as possible with patients and less time burdened with administration. Allowing us to automate and simplify your processes frees up valuable working time for your employees and results in fewer errors.
